

Clinic AI Executive Brief

Forward Arrow Services

Clinic AI Starter Series™

Human-first AI guidance for real-world clinics.

Why This Matters Now

AI is already entering clinical environments - often without formal oversight.

The risk is not AI itself.

The risk is uncontrolled use.

What's Actually at Stake

- HIPAA violations from improper data use
- Staff using unapproved tools
- Inconsistent documentation practices
- Loss of control over patient-facing communication
- Vendor risk that leadership does not fully see

What Most Clinics Get Wrong

- Assuming AI tools are safe by default
- Letting staff experiment without guardrails
- Treating AI as a solution instead of a tool
- Focusing on features instead of risk

A Safe Path Forward

Start small. Stay controlled.

- Define one low-risk use case
- Keep PHI out of early testing
- Require human review for all outputs
- Evaluate vendors before expansion

The Position That Works

*Use AI to support operations -
not to replace responsibility.*

What Forward Arrow Provides

- AI use policy and guardrails
- Tool evaluation and risk review
- Pilot design and rollout support
- Ongoing governance guidance

Closing

AI can create real efficiency in a clinic.

But only when implemented with discipline, clarity, and compliance.
